TO OUR CUSTOMERS.

AT the Centennial Exhibition of 1876, we had a collection of 750 kinds of ligneous plants, which received the Centennial award.

We have forty acres in nurseries, *in the City of Philadelphia*, at Germantown, and we cordially invite an inspection. Visitors should take the steam cars at Ninth and Green Sts., Philadelphia, for Chestnut Hill, getting off at *Gorgas Lane Station*, to which our nursery is quite close; or the Fourth and Eighth Street horse cars, Philadelphia, to upper Church Street, Germantown, on which is our office.

Almost all our stock, with the exception of one year seedlings, of course, has been once or more transplanted, and thus complaints of losses from those who buy of us are almost unknown.

FORESTRY.

Where seedlings are required in quantities, for forest planting, liberal rates will be made, or contracted for a year in advance.

ANY QUANTITY can be sent

BY MAIL.

Hundreds in distant places get plants of about one foot in this way—even to Europe and California. For these orders add ten cents to every dollar to prepay postage.

THE PRICES

Are for the usual good stock, as sold in most respectable nurseries, and of our own selection—but we keep on hand almost of all kinds named in the catalogue.

SELECTED SPECIMENS,

Which, by frequent pruning, training, or transplanting, have added somewhat to the cost of the ordinary nursery tree, and which we sell at the lowest rates consistent with the extra labor that has been spent on them.

Parties with little experience often write, "We do not care to pay for packing—a little straw around the roots will do." This is a mistake, the cheapest part of a bill of trees is

GOOD PACKING.

Always have a box. An accidental delay of a month will then not hurt them much. We charge only for the cost of the box, generally about three dollars for a large eight feet case, or less in proportion.

SHIPPING

Is direct from Germantown to any part of the world, by sea or land.

TERMS.

In all cases cash, on or before delivery to Express or Railroad agents unless by previous special arrangement. As the price for single plants is given, only the quantity named will be sold at the stated rate. Post Office orders payable at Station G, Philadelphia.

QUALITY OF STOCK.

In the twenty-five years existence of this nursery we have never **GUARANTEED A TREE TO GROW.** This is an additional security that the customers will get good stock—for a nursery could not prosper for a quarter of a century which sent out bad stock and also declined to replace it.

We make a specialty of collecting seeds of trees, shrubs and fruits, catalogues of which can be had on application. The list will also include seeds of desirable perennial plants we can furnish.

DESCRIPTIVE REMARKS.

Anywhere in the United States one may be struck with the meagreness of the variety the planter has to choose from. A nursery like ours offers a thousand for selection, but few know what to select. We are often asked, why do you not issue descriptive catalogues? These can only be issued when the collection is comparatively small. A descriptive catalogue for a collection like ours, means a thousand dollar book. We now endeavor to partially meet this want by a

SYSTEM OF INSTRUCTIVE REFERENCES.

The details of which will be found under each head. See contents, first page.

DECIDUOUS TREES.

REFERENCES.

- a* Rapid-growing, deciduous trees, very hardy, and well suited to side-walk planting, shelter belts, timber, or park trees.
- aa* Less rapid growing trees for the same purposes.
- b* Trees of *a* and *aa* classes, which have beautiful flowers, colored leaves, or showy fruit.
- c* Are trees not well known, but have so many desirable characters that, once introduced to public notice by local nurserymen, *would be sure to meet with a ready sale.*
- d* Trees of low growth, seldom exceeding twenty-five feet high, even after many years, admirably adapted for small places or for larger grounds where dense masses of thick growth are desirable.

SHRUBS.

REFERENCES.

- e* Shrubs of the largest size, well adapted for thick masses or screens, as well as forming handsome objects as single specimens.
- f* Shrubs usually under six feet high.
- g* Shrubs valued chiefly for their manner of growth.
- h* Shrubs valued chiefly for their flowers, or fruit.
- 1, 2 or 3* Figures which indicate that the highest attraction is at spring, summer or autumn.
- i* Shrubs which do well in dry or partially shady places.
- c* Rare or not well-known shrubs, possessing desirable characters, which, once introduced by nurserymen, would be sure to meet with a ready sale.

EVERGREEN TREES AND SHRUBS.

REFERENCES.

- a 1* Trees of the largest growth and very hardy.
a 2 Trees of the largest growth, but require protection from cutting wind in winter time.
b 1 Evergreen shrubs, very hardy.
b 2 Evergreen shrubs, better for protection from cutting winds in winter.
c Rare or not well-known evergreens, which would no doubt prove very saleable when introduced by local nurseries.

VINES AND CLIMBERS.

REFERENCES.

- a Very hardy vines, of strong and rapid growth, valued chiefly on account of their rapidity.
- b Strong growers with showy flowers.
- d Vines of more delicate growth, the growth being the chief attraction.
- e Delicate vines with showy flowers.
- f Sweet-scented flowers.
- c Vines not well known, but which have good characters, which would render them popular when introduced by local nurserymen.

WE take pleasure in again calling attention to the merits of the

JAPAN SNOWBALL,

for we believe we were the first to introduce this beautiful shrub to the American public. Every one knows and admires the common snowball. The Japan species possesses all its good qualities, while free from what may be objected to in it. It is not a stragling grower, but each shoot stands boldly upright, supporting with ease its numerous bunches of pure white blossoms.

JAPAN SNOWBALL (*Viburnum plicatum*.)

It forms one of the prettiest shaped shrubs on the lawn, and in this respect is much the superior of the old sort. Then, too, the leaves are attractive. They appear as if plaited, are of a deep green color, while the veins and young shoots are of a coppery red appearance.

The above cut gives an idea of the beauty of the plant.

For prices, see page 17.
